Total Individuals	9798			
Total Species Reported	135			

cw = Reported count week
US = Flagged as an unusual species
HC = Flagged as an unusually high count
LC = Flagged as an unusually low count

Species Requiring Rare Bird Reports to be Submitted to Regional Editor

Species

Hooded Merganser - [Lophodytes cucullatus]
Pacific Golden-Plover - [Pluvialis fulva]
Tree Swallow - [Tachycineta bicolor]
Violet-green Swallow - [Tachycineta thalassina]
Black-and-white Warbler - [Mniotilta varia]

Special Aspects

CAMN -- Mendocino Coast -- 30 December, 2011

The CAMN CBC was first held in 1974. The location is in remote SW Mendocino County, bordered on the north by Elk and on the south by the Pt Arena Lighthouse. Count day was drizzly and foggy in the morning, but it was partly cloudy in the afternoon. Some people went back over their areas and picked up a few species, so the total appears to be average, but with a low number of individuals. Woodpeckers hid and were quiet all day. The general weather previous to the count was very dry, resulting in low water levels in ponds and creeks. The one bird responsible for the CAMN location is the Tundra Swan. Wintering birds used to number in the hundreds, but this year was an all-time LOW of only 8 individuals!

Species requiring descriptions were fewer. Write-ups being mailed to the regional editor are: Hooded Merganser, Pacific Golden-Plover, Violet-green Swallow, Tree Swallow and Black&White Warbler. Being the very first person out on Hwy 1 paid off with a record high 19 Barn Owls sitting on fence posts. -- Karen havlena, Compiler
